Fitter attended site, found gate part open, no response on electrics in open or close direction. Found the following, internal edge activated due to end connection loose. Internal photo beam out of line, external beam sender unit battery depleted and gate hinges dry. Fitter rectified all faults tested and left in working order. (Note sourced CR 3v battery from local shop, battery new but best before date is 2016 and all available local so suggest this be replaced for newer)
